We Contribute to Heat Treatment All Over the World

The AICHELIN Group, with its 1,000 employees, is one of the world’s leading providers of heat treatment solutions. These include industrial furnaces, industrial heating systems, control and automation systems, Industry 4.0 solutions and services. The company’s roots go back to 1868 and provides leading enterprises in the industries of fastening technology, automotive, drive, transmission technology, aerospace, tooling, bearing and semi-finished products, hardening, steel and forging technology, mechanical and plant engineering and other sectors such as medical technology with state-of-the-art standard or customized heat treatment equipment and technologies.

AICHELIN is represented by subsidiaries in Austria, Germany, Slovenia, France and Türkiye. Its global presence includes subsidiaries and branches in China, India and the USA, as well as a sales network in further 22 countries.
Benefits of AICHELIN Vacuum Furnaces

EXTENDED LIFETIME AND RELIABILITY
Achieve an extended lifespan with consistent, reproducible results, ensuring reliable performance over time.

USER-FRIENDLY DESIGN
Benefit from easy operation and maintenance, enhancing user experience and reducing downtime.

ENERGY EFFICIENCY
Maximize energy efficiency with advanced insulation and a cold wall design that minimizes surface losses.

RAPID HEATING AND COOLING
Rapidly heat and cool both small and heavy charges, reducing cycle times, improving process efficiency and throughput.

PRECISE PROCESS CONTROL
Perform accurate process cycles using both furnace and load thermocouples for precise temperature control.

LOW MAINTENANCE COSTS
Utilize effective convection heating and cooling cycles with the same moving fan, ensuring low maintenance costs and efficient performance.

FULL COMPLIANCE
Compliant with applicable international standards such as CQI-9, NADCA, NADCAP, AMS 2750 etc.

Special dimensions are available for your special needs.
Vacuum hardening furnaces are used in industrial sectors such as aviation, aerospace, energy, tooling, die and mold, automotive, medical industries and heat treatment companies.

AICHELIN offers solutions for vacuum heat treatment in full compliance with international standards such as AMS 2750, ASTM, NADCAP, NADCA CQI-9 etc.

Options include:
1. different materials for heating chambers including graphite, molybdenum and tungsten
2. wide vacuum range from $10^{-2}$ mbar and deeper
3. process temperatures between 200°C to 2200°C
4. cooling gas pressure up to 20 bar

Product Overview - Vacuum Furnaces
- Vertical and Horizontal Loading Vacuum Gas Quench Furnaces
- All-metal Vertical and Horizontal Loading Vacuum Gas Quench Furnaces
- Vertical and Horizontal Loading All-metal Heat Treatment Furnaces for aerospace sector
Vacuum Gas Quench Furnaces

- High efficiency molybdenum-graphite heating elements
- 200 – 1430°C process temperature range suitable for a variety of heat treatment applications
- Gas cooling up to 20 bar for your special heat treatment
- Nitrogen-argon-helium cooling option specific to your infrastructure and process
- Partial Pressure Control feature to prevent sublimation from the material surface in $10^{-2}$ mbar – $10^{-6}$ mbar
- Special cooling process to minimize distortion of parts
- Energy and time savings with 25% faster cooling
**Vacuum Oil Quench Furnaces**

**VOQ series** offers excellent hardening results for vacuum heat treatment processes where gas quenching cooling rates are not sufficient. It also provides repeatable and recorded heat treatment recipes for your special products. Thanks to VOQ double-chamber sealed design and special transfer mechanism, the whole process is completed under vacuum to ensure the highest quality.

**VOQ CAN OPTIONALLY PROCESS THE FOLLOWING HEAT TREATMENT OPERATIONS:**
- Carbonitriding with oil quench
- Tempering
All-In-One vacuum heat treatment furnace allows you to meet your various heat treatment requirements with one single furnace. It is an ideal investment for your business if you need to change between different heat treatment processes requiring oil or gas quench. Thus saving cost and space within your heat treatment department.
Brazing is a special joining process that can be performed smoothly at high temperatures under vacuum. Vacuum brazing is in many ways advantageous compared to welding:

- Less distortion due to uniform heating and quenching
- Smooth joints without surface oxidation
- Possibility of conducting tempering and hardening along with brazing in one furnace
- Possibility of effectively joining pieces with complex geometry

AICHELIN vacuum furnaces cover a wide range of brazing techniques from general exchanger applications to complex aerospace parts with different brazing alloys and base materials. AICHELIN offers designs with multiple heating zones including special insulation and heating systems for different processes such as aluminum brazing.
Vacuum Tempering Furnaces

AICHELIN Direct Heated Vacuum Tempering Furnaces deliver excellent temperature uniformity, rapid heating and cooling performance in a single-chamber design. In order to achieve a spotless surface of quenched parts after tempering the furnace is designed to ensure the necessary parameters for the desired surface quality. Deeper vacuum levels allow more flexibility for various heat treatment applications like aging of aircraft engine parts. AICHELIN Vacuum Tempering Furnaces can process a wide range of materials for ageing, annealing or stress relieving.

COOLING CYCLE

Excellent Temperature Homogenity
Up to $10^{-2}$ mbar Vacuum Level
Shorter Cycle Times
New Generation Cold Wall Technology

HEATING CYCLE

Bright
Lower Energy Consumption 25-30% Saving
High Production Efficiency With Low Maintenance Needs
COOLING SYSTEM & CIRCULATION FAN
A special cooling fan with water-cooled motor, high-capacity internal heat exchanger made of copper tubes with excellent heat transfer capability and two cooling flaps actuated by pneumatic cylinders. After evacuation the furnace is pressurized with inert gas, the fan circulates inert atmosphere (N2 and optional N2+H2, Ar, He) around the charge during both the heating and cooling cycles. The combination of radiant and convective heat transfer to the work pieces provides outstanding uniformity. Furthermore, due to direct heating and direct cooling, the overall process time is reduced and efficiency is increased in comparison with conventional furnaces.

HEATING CHAMBER
Heating chamber is insulated with high density ceramic fiber captured between stainless steel shielding plates, stainless steel load support and cooling flaps.

HEATING ELEMENTS
Wide band Inconel heating elements ensure superior heat distribution to all sections of the charge.
Low Pressure Carburizing Furnaces

LPC furnaces are unique solutions for surface hardening of steels, offering flexibility for both low and high production volumes. The following types of LPC furnace can be supplied:

- Single Chamber High Pressure Gas Quench
- Double Chamber High Pressure Gas Quench
- Triple Chamber High Pressure Gas Quench with pre-heating
- Oil Quench Furnace
- Oil Quench Furnaces with pre-heating chamber
- Modular system with various heating and cooling chambers (oil and/or gas quench)

**BENEFITS OF AICHELIN LPC FURNACES:**

- Reduced process time due to optimized carbon transfer and temperature control
- Achievement of homogeneous case depth and hardness with low distortion after quench for carburizing of complex geometry parts.
Hydrogen Gas Quenching

Gas Quenching is an environmentally friendly, low-distortion technique. Hydrogen is the most effective gas for this application with rapid cooling rates, and AIChE LIN provides as a further Option a safe design to use this light gas at up to 20 bar cooling pressure.

Special Vacuum Furnaces

TYPES OF SPECIAL VACUUM FURNACES
- High-Temperature Vacuum Furnaces
- Metal Injection Molding Furnaces (MIM)
- Custom Design Vacuum Furnaces
- Vacuum Nitriding Furnaces
Our advanced control system allows you to archive measured process parameters and access detailed records in the database anytime. Additionally, the system facilitates documentation of these parameters in line with system requirements, ensuring consistent quality. It also provides comprehensive information for visualizing and ensuring the technological process.

MAIN CHARACTERISTICS:

- Functionality and Easy Service Availability
- Integrated Management
- Easy and User-Friendly Interface
- Full SCADA Integration possible
- Remote Access to the SCADA System
- Compliance with NADCAP Standards
- System Accuracy Test (SAT) Integration
- Thermo-Elements Operation Time Trackers and Calibration Page
- Temperature Uniformity Survey (TUS) and Reporting
Vacuum Furnace Maintenance

EASY AND QUICK MAINTENANCE
AICHELIN compact design provides easy and quick circulation fan repair and maintenance inside the heating chamber. CFC circulation fan and special water-cooled motor is positioned on the heating chamber door for easy access, control and maintenance without the risk of damage to the heating chamber and having to remove the complete hot zone.
Our Service

AICHELIN vacuum furnaces not only meet the highest quality standards, but also optimum performance and reliability. At AICHELIN, we combine technical expertise, flexibility and highest quality with a first-class global service.

AFTER SALES & SPARE PARTS

- Annual Maintenance
- Spare Part Delivery
- Furnace Modernization
- TUS Test
- SAT Test
- Vacuum Leakage Test

AICHELIN can meet your spare parts requirements quickly and reliably in accordance with EN, DIN and ISO 9001 standards. In addition to supplying the highest quality heat treatment equipment, we also care about the continuity of your production programs.
